(1) Blue colour indicates for human use. Red colour indicates for AI only.							
Mission Success criteria		Cowboy	You must destroy more aircraft in air to air combat than you lose to all causes, AND prevent the destruction of any of the four EWS radar's at Sinan-ni, Anbyon, Yongso-Dong, Koch,am-ni				
		Falcon	As above				
Mission Partial Success criteria		Cowboy	You must prevent the destruction of any of the four EWS radar's Sinan-ni, Anbyon, Yongso-Dong, Koch,am-ni OR you must destroy more bandits in air to air combat than you lose to all causes but any of the army base's get damaged				
		Falcon	As above				
Air to Air Weapon Loadout (Free or Fixed)		Fixed, 2xaim9P missiles, guns					
Air to Ground Weapon Loadout (Free or Fixed)		Fixed, 1 centre line fuel tank					
Mission Flight plan (Free or Fixed)		Free					

BACKGROUND

The UFS Airforce came equipped with missile armed escorts on thier last raid, despite this thier raid was not as succesful as the previous two raids so we claim victory but at a heavy cost, we lost many pilots and aircraft but it was not in vain, our new hot ship is here, she is the fastest thing in the sky and armed with 2 missiles and a bit more fuel, use them wisely and do not lose too many

CURRENT SITUATION

We are expecting a MAJOR sized raid, air raid warning GREEN, from the south and from the sea as the UFS are intending to intensify an operation called "creeping storm" using both land and carrier air wings so expect raid targets to be between the south Border and Wonson area, we intend to resist with all possible means and so this is expected to be a

serious test of our new fighter and the ability of the 185th air defence regiment to use it. With the loss of so many low level reconnaissance aircraft we expect they will change their tactics with them, we also have two new SA2 Guideline missile batteries installed around our major centres of Wonson and Tokson, look for the tell tale missile launches, they will point right at the enemy, we hope to have the means to bring down a U2 spyplane with our new planes and missiles. We have plenty of time to get into position to execute an attack we won't be launching straight into a battle

MISSION DETAILS

Weather – -

a.09:05 b. Weather wind 185/5 CAVOK

Enemy – Enemy Su22 "thunderchiefs" have been given a bloody nose and we expect them to be still out of action, the IL28 "Canberra" light bombers are also expected to be out of action this leaves the the J22 "hun" fighter bombers, we are expecting to see the SU20 "daggers" air defence fighters to put in an appearance again, the kitty hawk carrier is returning to station and is expected to be a factor and the carrier Enterprise is still doing workups with its air group and not expected to be a factor.

Friendly – only two sqns available, it is highly recommended that any flown by comrade AI are RTB'd since they will be rookies V ace and their loss counts against your result, RTB them.

You are part of an integrated air defense system and will get updates and hostile calls via our command system (AWACS)

Mission – you are a small band of our country's best pilots, you have been trained to take on a mighty foe who have numbers and technology on their side, however as uncle Ho Chi Tomb has said, it not the size of the dog in the fight that matters, it's the size of the fight in the dog that counts, how often have you heard "it's the pilot not the plane", you comrades will get to prove that statement How ever we will not win a war of attrition so it is imperative that we shoot down more bad guys than we lose aircraft and pilots so if 4 take off and only 2 land, for mission success, two or more bandits must be destroyed and the objective defended with no damage, other wise it's a partial success if the objective has been defended but more of our aircraft have been lost due to crash/shot down or any other reason, than we shoot down in air to air combat.

Target – our advantages lay with our pilots and our aircraft which can out turn and out accelerate anything our opponent has. We are Guns only at the moment but a shipment of missiles for our aircraft and ground defence's are inbound via ship. The bad guys are known to have the AIM9B which requires them to be close in and in a narrow arc behind you and have you near boresighted in front of them, if fired upon, retard the throttle and turn tight, the missile is easily defeated..if its seen. The F4 can also carry the Aim7E which is radar guided but has a low probability of hit, basically fly lower than the bandit making it difficult for his radar to lock on, if he does lock on, beam the bandit, its a non pulse doppler radar and will usually lose lock, the aim 7 is easily defeated by the wary pilot.

Team tactics will count for a lot, the solo pilot will soon end up being painted as a star on the opponents aircraft, remember in most battles you will be outnumbered so choose the moment of attack carefully and have at least one pilot just watching that no one lines you up for the kill while you are concentrating on the bandit. Also remember that if the bomber has dumped its bombs in response to your attack you have achieved a mission kill, consider carefully before pressing the attack, surviving should be your first priority, disrupting all the attackers your second priority, and getting a kill your third priority.

We have further missile and engine upgrades for our fighters coming.. it is imperative we survive long enough to receive them.

ROE - all combat is likely to be at very close range, there should be no reason to mistake an F16 for anything else

Ordinance – 2xaim9P missiles + Guns+ centre line fuel tank, nothing else to be loaded

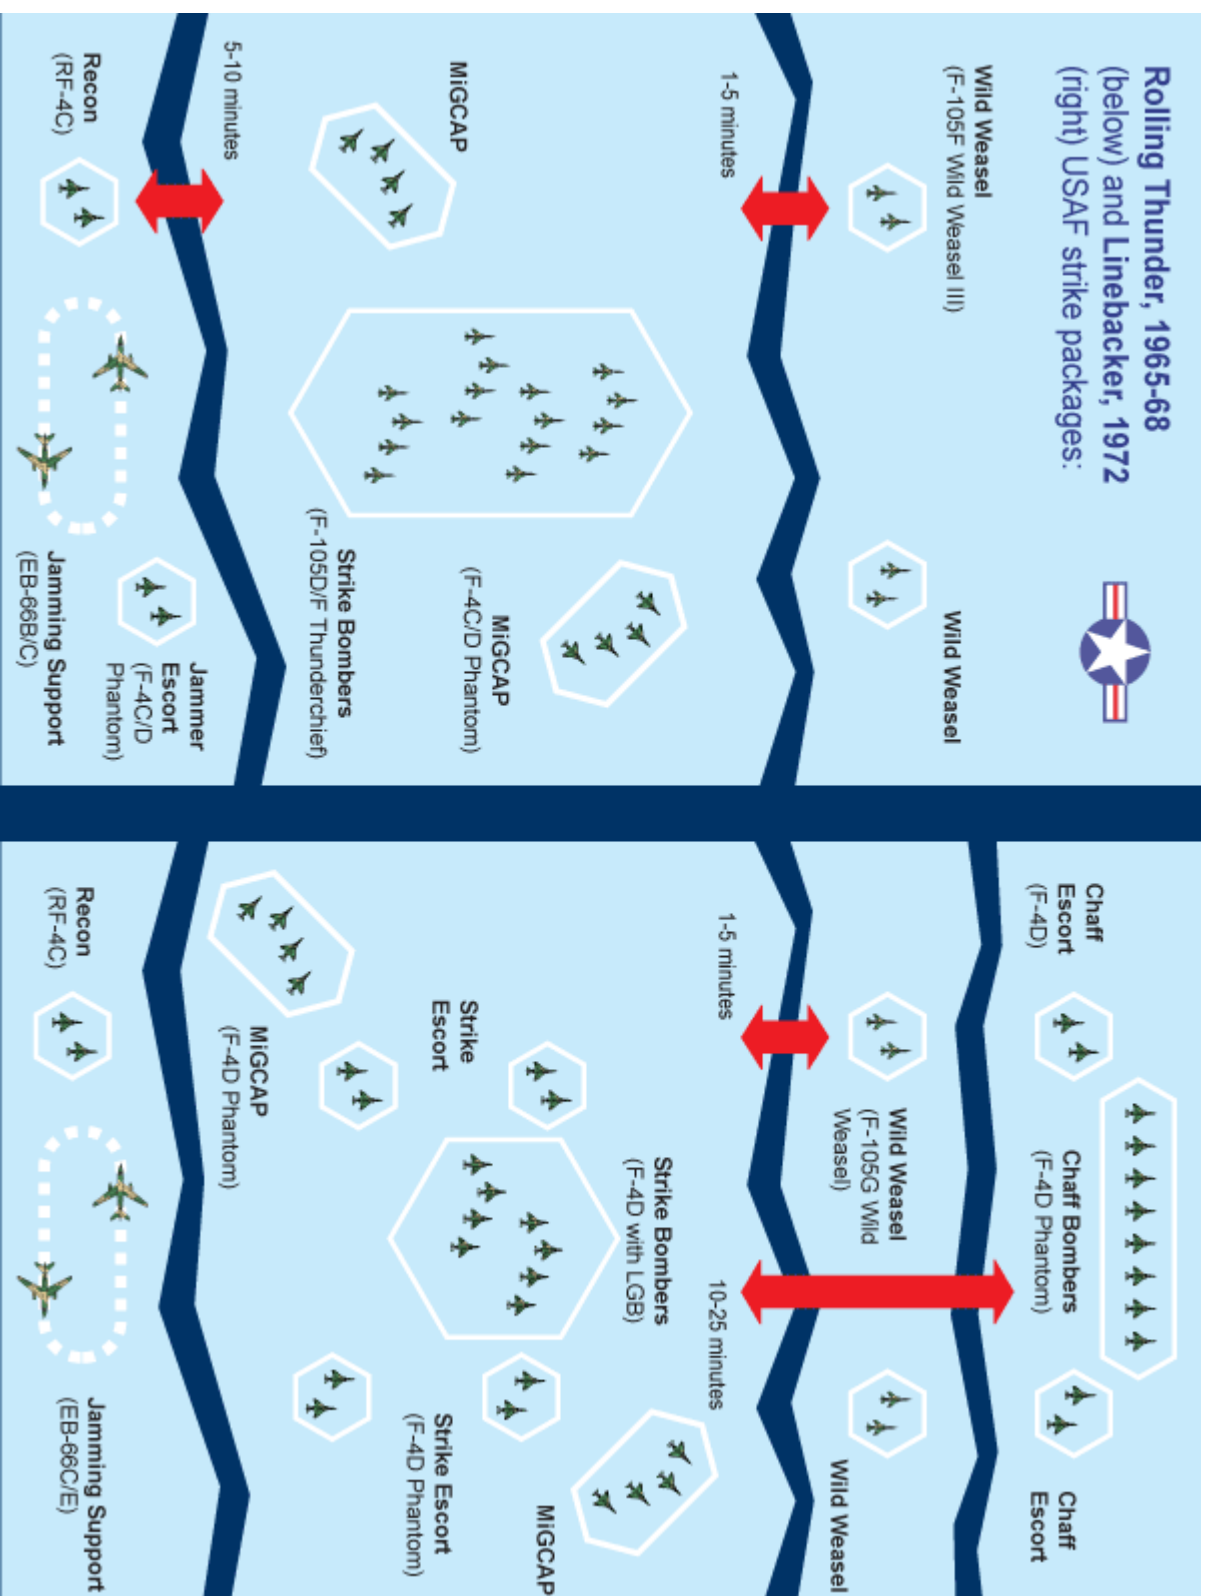

Extracts from Janes Big book of planes

New Jet being wrung out by a pilot of the 185th regiment, now in active service

One of the 185th pilots has spotted a pattern to the attacks, one of our well placed spies has “obtained” the blue prints for the UFS air force and navy battle planes, use wisely in planning your attacks on the enemy formations and be aware the planes may not be the type depicted in the formations but they will perform that role in the formation.

At the moment the UFS forces have not the numbers to fully deploy all the strike aircraft, but rest assured they eventually will, hopefully the 185th regiment will have developed tactics to deal with it by then. Our SAM defences will also be expanding rapidly so the 185th should plan on operating as part of an integrated air defence plan

Vietnam-era USN strike package (USS Constellation, 1967):
