## BACKGROUND

It has been a long war and we are loosing it. North Korea with help of rogue nations like China, Venezuela and Iran, managed to build up 1<sup>st</sup> class armed forces. Their arsenal contains almost every type of airplane, weapons and defense systems that they could find in the market. Their pilots received also in last years intensive training by former russian officials and are believed to be superior to the average allied pilot. Their modern defense network system is based on classified american plans stolen some years ago. Allied Forces are committing at the moment more air units to the theater, hoping we can hold our positions near to Kwangju and Taegu/Chinhae. The 185<sup>th</sup> is one of these reinforcements.

## CURRENT SITUATION

The allied position at Kwangju seems stable for the last 24 hours. The same can not be said about the Taegu/Chinhae area. Recent intelligence shows at least one north korean

tank regiment is moving towards Taegu. We believe their spearhead is formed by two T-80 battalions followed by several state-of-the-art mobile air defenses (SA-6, SA-11 and SA-17). Their target seems to be our vital army bases west of Taegu, namely: 2<sup>nd</sup> Army Base, Camp Walker and Camp Stanley. These bases are at the moment just being defended by two light infantry battalions.

The latest intelligence from our satellites suggests the enemy battalions are approaching TAEGU by using two roads indicated in the map above (marked as target area ALPHA and BRAVO). Our analysts also suggest that the enemy may use air infiltration tactics to open a new front east from Taegu.

NOTAM  
Kadena Airbase  
Runway 15-33 NOT OPERATIONAL.  
Only Active Runway RWY 01.  
**WARNING:** intersection RWY 01 with RWY 15-33 destroyed

## MISSION DETAILS

Weather – Weather seems stable with light cloud coverage near to the target area.

Enemy – North Korea possesses several high-threat 4<sup>th</sup> generation aircraft (for example SU-35 and MiG-29SM) capable of carrying the R-77 as well as 3<sup>rd</sup> generation low-threat vectors like the MiG-21MF. Besides that, our infiltrate intelligence discovered that six damaged F-16C-40s, captured in Seoul after it was overrun by the enemy, are now operational. We can not confirm at the moment either what is the status of AIM-120Bs left by mistake at the airbase nor if the north Koreans were able to train pilots to operate these aircrafts.

On the ground, our satellites confirm the extensive employment of mobiles SA-10s and SA-6. However, due to fast advance of their ground forces, we believe that their spearhead heading to Taegu has no air defense coverage at the moment.

Friendly – A flight of A-10s (Bull1) and AH-64 (Mohawk1) will be operating in the target area against the same targets. Coordinate with the AWACS to avoid Blue on Blue events.

Mission – Our mission is to provide CAS for two light infantry battalions defending the army bases near to Taegu by engaging enemy tank battalions approaching from west AND to provide local air superiority for allied forces at the area.

A flight of AH-64s (Mohawk1) will operate at the target area ALPHA, while a flight of A-10s (Bull1) is attacking the enemy batallion in target area BRAVO. Falcon1 flight is cleared to operate in both target areas. The A-10s will be operating in the target area BRAVO from **05:19**, while the AH-64s will start their attack in target area ALPHA from **05:32**.

Target – A north korean tank battalion consists of 41 vehicles and includes 4 deadly 2S6 Tunguska (SA-19 Grison). The battalion must be attacked carefully to avoid exposure to this AD weapon. See please the tactical reference for more details.

*SA-19 Grison (2S6 Tunguska) is capable of engage air targets with IR missiles at altitudes from 15 up to 3500 meters. In close range, its four 30mm cannons are able of 5000 shots per minute!*
