

## **ELECTRIC AVENUE**

Driven by recent defeats, the DPRK High Command are considering the use of chemical weaponry, in the way of most Nations however they do not keep their stocks where we can easily find them, this time however we have been fortunate enough, (thanks to a special ops recon team) to discover a large cache of material which forms a primary constituent of one of their chemical agents, by itself it poses no danger hence if we can destroy the stock now it will be a blow to their plans, the Chemical is currently being stored in an innocuous looking storage tank at the Electrical factory in South Pyongyang, This Tank is our target.

An SA3 battalion defends it and the surrounding area has several AAA units in place, there are in addition 2 Motor rifle units patrolling the area.

Air threats are high in number and Quality, at Sansago-ri are based the Crack SU27 Squadron (3707<sup>th</sup>) recently "Borrowed" from China, they will not want to take any great risks with these so they are sure to keep their CAP well to the East, However they will certainly be taking no chances and you can be certain that they will have a full load of AA12 Adder Missiles (6 each!) to defend themselves, do not get drawn by anything to the east!

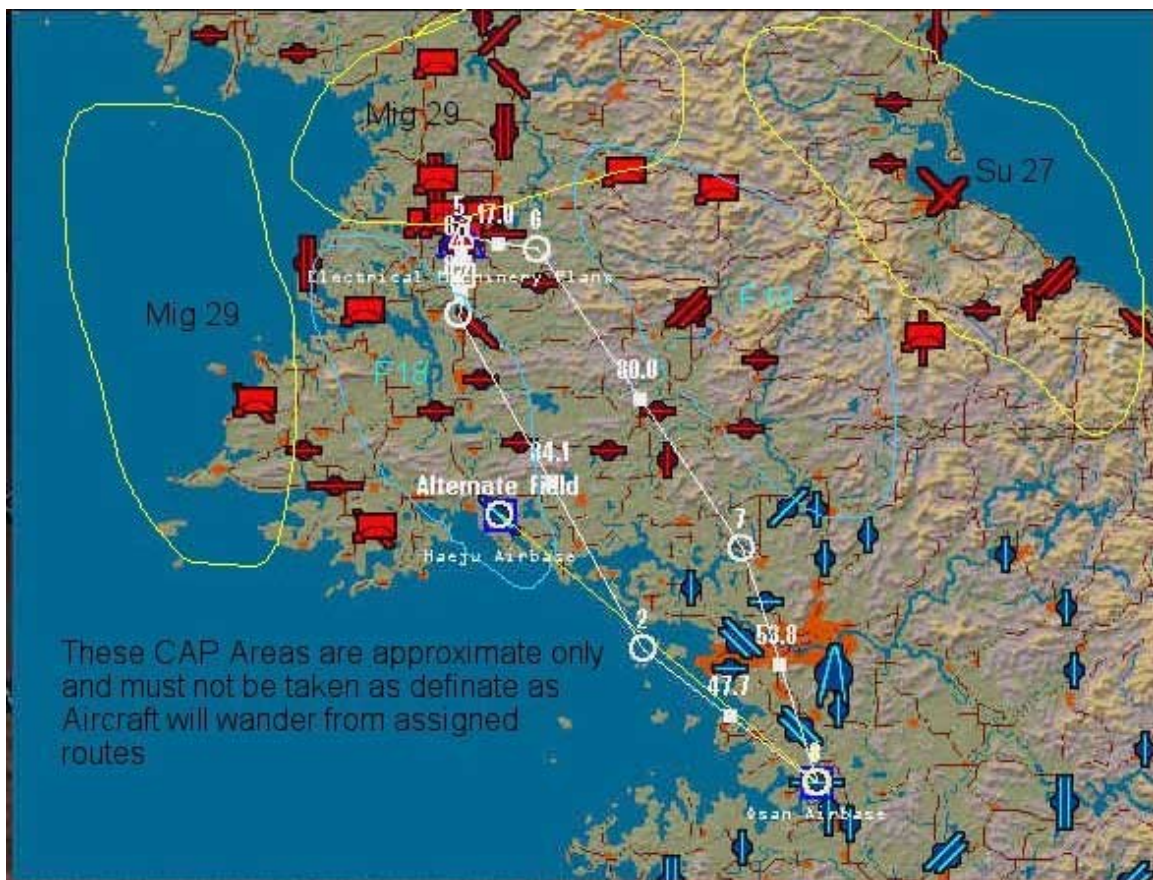

To the west at Kwail are based the 3703rd Mig 29 fighter unit who have consistently been patrolling the west coast region usually as four ship CAP's, mig19's and 21's as well as a further Mig29 unit to the north are all expected to be active during the mission, so it will be a busy time, because of the heavy Airborne defenses to the East and West HQ has added 2 flights of F18/c aircraft to fly parallel to your route to provide protection from the higher threat aircraft should they be vectored towards you, you therefore should stay within the Avenue thus created.

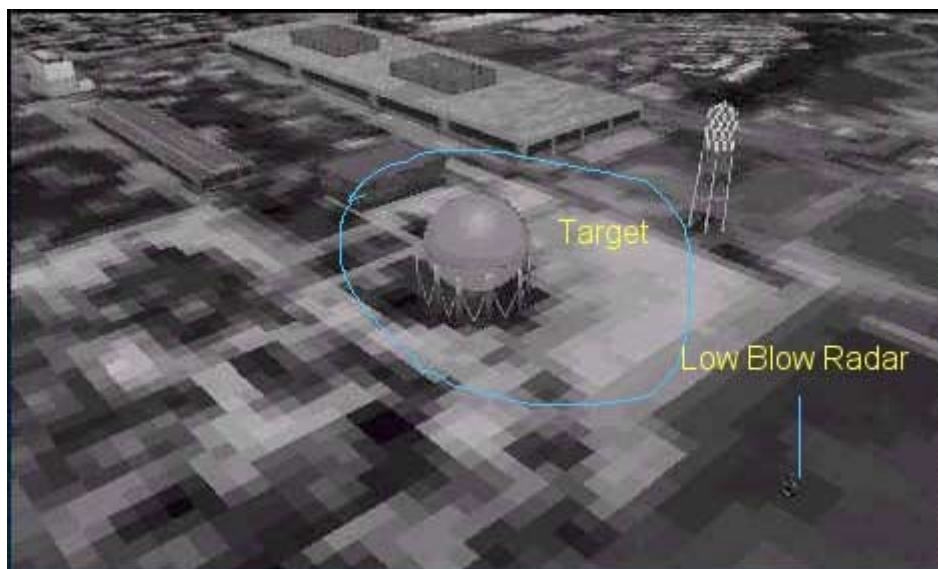

Aircraft for the strike will consist of a Package made up of:

2X F16/C SEAD Escort with 1X AGM88; 6X CBU 58; 5X AIM 120 (air weapons are optional so if you wish you may substitute AIM 120 for AIM 9M)

2X F15/E Deep Strike With 2X GBU 24; 8X AIM 120

A/G Weapons are fixed.

Pilots are to fly the F16 or F15 only; The F18's are on 40-minute DCA missions and are AI planes only.

**Last minute update**, HQ has decided that an SA5 battalion to the east of the target might be a higher threat than previously though, so a further Flight of 2 F16 SEAD Escort aircraft have been added. These are available for those who have a Phobia about flying anything other than a viper! But the planes do have a valid role in the mission and share responsibility for the success of the strike flight, so look after them F15E's!!

Falcon will give you a mission success for hitting any building at the target site, therefore a **screenshot of the events drop down showing the tank destroyed** will be required for a genuine mission success score.
